created by VIKKING

**THE ONLY PVC WINDOWS ON THE MARKET  
WITH REAL WOOD DECORATIONS.**

Real Wood windows, unlike wooden windows,  
do not require expensive maintenance.

# RealWood<sup>®</sup>

look  
created by VIKKING

## Innovative Idea

Wooden products, during operation in the facilities are vulnerable to many threats from destructive effect of moisture on the hygroscopic wood construction. From here the idea was born of creating the special surface on PVC profiles, to provide them with the aesthetics of fine wood and eliminate the effects and inconvenience caused by the use of wood.

## Innovative technology

Decorated PVC profiles using RealWood technology, unlike wood does not require care for protection against the weather. Any coating repairs are also possible on site, where windows are already mounted.

## Innovative design

Developed by PW VIKKING engineers proprietary technology is the subject of international patent protection. The attractiveness of the acquired visual effects provoked us also to patent an international industrial design.

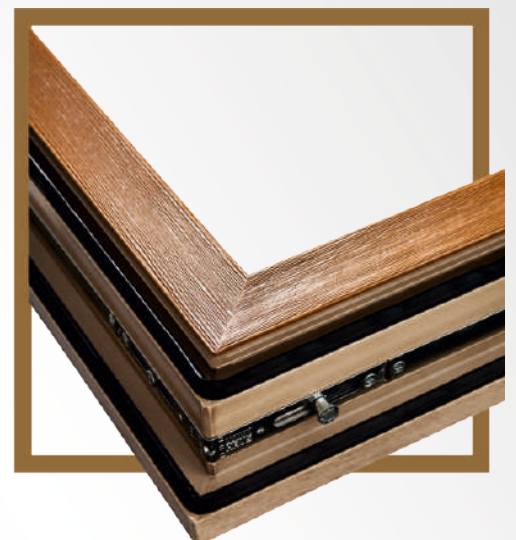

# VIKKING INNOVATION

Decorated PVC profile technology

Surface decoration of PVC profiles in the RW technology eliminates the need for laminating the profiles and ensures long durability of the resulting structure.

The world's only PVC windows with a noble wood structure. The proprietary technology developed by the VIKKING engineering team is subject to international patent protection.

## PREMIERE 2023

Window coating technology in all RAL colours with completely invisible welding technology sealing gives your windows a real character.

Entrust us with your wishes and our designers will do their best to realise the most imaginative solutions.

After all, our motto is "what is impossible for others is standard for us"

# PREMIERE 2023

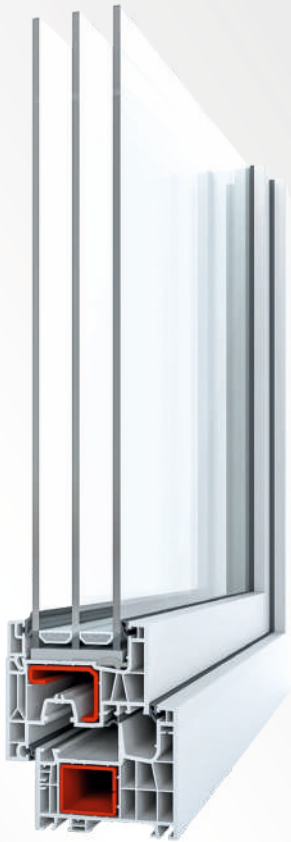

## VISION NEO

In today's rapidly changing times, we are inundated with stimuli. This is contrasted by simple forms and clear structures. They are calm and soothing.

The neo system is a new dimension in window design, able to meet the highest energy efficiency requirements and the latest design trends.

VISION NEO MD

VISION NEO AD

VISION NEO ENERGETO

- Installation depth: 76 mm
- Heat transfer coefficient: 0,99 W/m<sup>2</sup>K
- Number of chambers: 5-6
- Sealing system: 2 (AD) or 3 (MD) seals
- Reinforcement system: steel / powerdur
- Available profile styles: classic-line flush, non-flush,
- Available in numerous decor designs
- Woodec/Aludec

VISION NEO PLUS ENERGETO

# BONDING INSIDE

Vision neo energeto is a platform dedicated to the technology of glass bonding, allowing to provide windows with even better performance.

The glue applied along the entire perimeter of the adjacent surfaces of the glass unit and the frame permanently joins them together and ensures that all glass units are properly supported at all times, which is not only beneficial to the compensation of stresses arising in the panes of the unit but also stabilizes and maintains the profile's susceptibility to deformation under the influence of forces arising from external atmospheric phenomena and operational loads within the acceptable

- Reduced risk of glass breakage
- Greater stability of windows
- Possibility of creating larger structures
- Better protection against burglary
- Extended window life

# SAFETEC INSIDE

The Vision energeto® neo system is one of the few systems on the market with the classic centre seal.

Safetec inside", which is a special extruded middle rebate, to which the third, internal seal adheres strongly ensures better tightness of the entire construction, improves thermal and acoustic properties and makes it more difficult to force open the sash by blocking access to the hardware.

# VISION NEO ENERGETO

ENERGETO NEO

Powerdur Inside

▶  Installation depth	76 mm Powerdur Inside - The fiberglass-reinforced thermoplastic replaces the steel used in conventional PVC window frames and provides significantly better thermal insulation properties with the same mechanical properties of the window.
▶  Number of seals	MD - 3
▶  Maximum glazing depth:	51 mm
▶  Max. Uf value:	Uf=0,99 W/m2K
▶  Sound insulation	Up to 45dB
▶  Hardware	Winkhaus Activpilot
▶  Colour palette	Standard Aluplast palette, Woodec and Aludec; RAL, Real Wood
▶  Warranty	5 years

## V-SLIDE neo

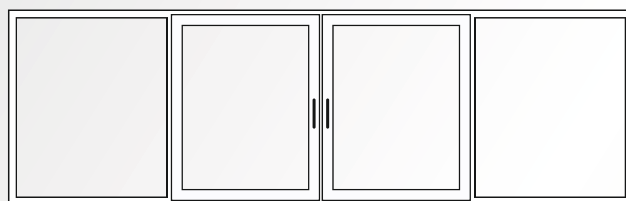

## NEW DIMENSION of comfort

Even larger dimensions, the possibility of using wider glazing packages and a unique angular, cubist shape of the profiles. V-SLIDE NEO patio doors combine ease of use, reliability, and beauty in one.

Scheme A

Scheme C

Scheme A symmetric

They can be configured in Configuration A (symmetrical or asymmetrical division) or Configuration C, with two panels sliding to the sides.

## V-SLIDE neo

154 mm frame installation depth

- $U_f = 1.3 \text{ W/m}^2\text{K}$
- Sash installation depth: 78 mm
- Hidden hardware mechanisms: YES
- Maximum width of the structure: 6000 mm
- Maximum height of the structure: 2500 mm
- Maximum glazing width: 52/54 mm
- Possible opening configurations A, C

# Terrace windows

## First impressions count

The front door is the showcase of your home. It should ideally match the architecture and design of the building and, at the same time, provide excellent thermal insulation. This is why it is so important to choose the right system to suit your individual needs.

VIKKING offers a number of window constructions, all of which are compatible with window systems and meet specific thermal insulation requirements. Wood veneers, lacquering in all colours of the world: the aesthetics are always satisfactory.

## V-SPACE

### Lift and slide patio doors

- 85 mm construction depth
- $U_f = 1.1 \text{ W/m}^2\text{K}$
- Up to RC2 burglary protection
- Up to 44 dB sound insulation
- Up to 51 mm glazing
- Available with aluskin® aluminium shells

It doesn't get any better: the 85 mm lift-and-slide door from aluplast impresses with its high energy efficiency and user-friendliness: even at its maximum size of 6.50 m x 2.80 m, the door can be opened and closed without effort and ensures a smooth and barrier-free transition to the outside.

It has been tested under extreme conditions: whether it is driving rain, storms or any other extreme weather conditions: the aluplast lift-and-slide door keeps everything out.

A barrier-free home?  
Low aluminium  
threshold

## V-LIGHT

### Tilt and slide patio doors

- Installation depth: 70 – 85 mm, depending on the system
- Possible opening variants: A, C and G
- Maximum size of the movable sash:  
1600x2100mm or 1400x2300mm
- Maximum glazing depth:  
41 - 51 mm depending on the system
- Application: Balcony, terrace
- Available in numerous decor variations

## V-SLIDE

### Lift and slide patio doors

- small construction depth of 70 mm
- $U_f = 1.3 \text{ W/m}^2\text{K}$
- glazing and panel thickness up to 41 mm possible (single- to triple-glazed)
- modern classic-line design
- concealed hardware technology
- selection of opening schemes: scheme A + C
- available in numerous decor designs
- optional bonding inside (adhesive technology)

# COLOURS OF YOUR WINDOWS

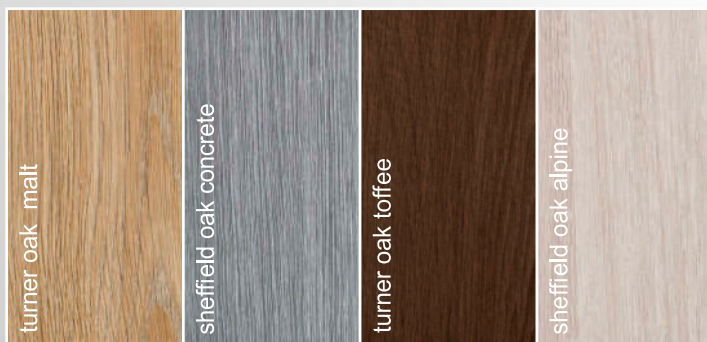

woodec

inspired by nature

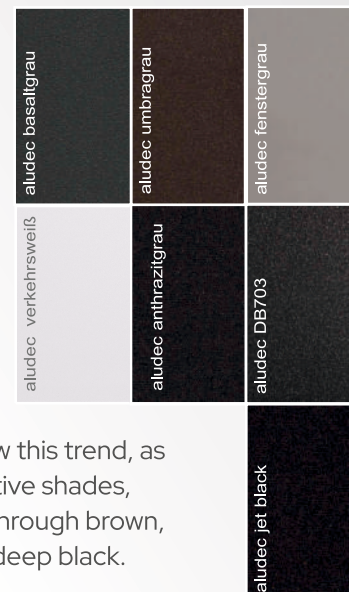

aludec

inspired by style

The new woodec surface offers the faithful look of real wood, among others due to its deep embossing and matt top layer. Scandinavian countries have had a great influence on the development and design of the woodec series. The Scandinavian style of home decor is characterized by the use of lots of wood, simple shapes, simple patterns and bright warm colors which make it so popular.

The attractive surface of aludec decorative structures, distinguished by a unique fine-grained, matt surface with a structure of powder-painted aluminum, is certainly a proposal that will go well in modern, minimalist arrangements.

The new aludec structures follow this trend, as they are offered in seven attractive shades, ranging from whites and greys, through brown, anthracite, and metallic Alux to deep black.

## AIRING

activPilot Comfort PADM is a combination of mechanical folding fittings with the additional function of parallel positioning of the door leaf from the frame and electric drive. The drive can control the moisture sensor or time, allowing you to actively ventilate your home even when you are away from home while maintaining security against burglary.

# ROLLER

## SHUTTERS

External roller blinds ensure good protection against burglary. They are not only used for home security but also provide excellent thermal and acoustic protection. Installation of external roller blinds provides many benefits.

### SAFETY AND PRIVACY

Roller blinds are perfect for protecting your home from both burglars and from neighbours looking in.

# MOSQUITO NETS

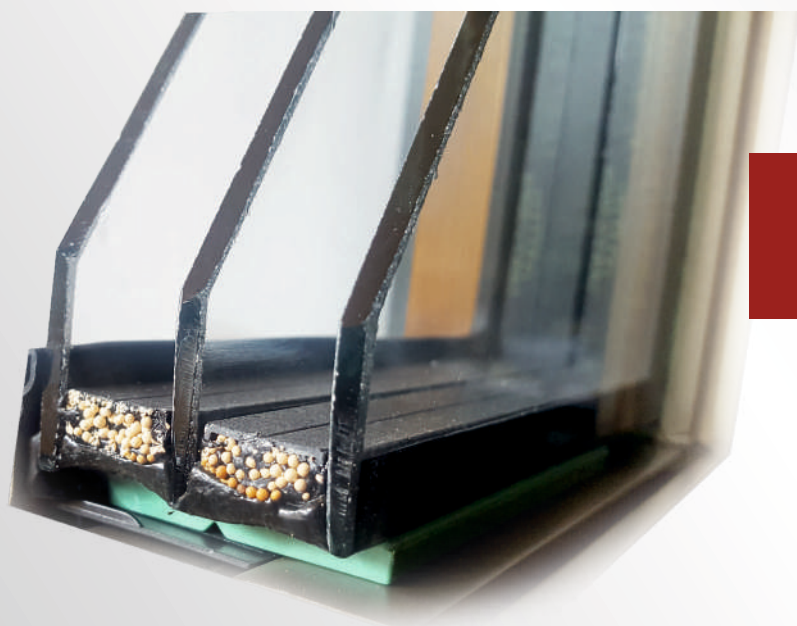

Kolor profilu: Mix kolorów  
Kolor siatki: Popielaty

Mosquito nets are a functional and practical protection against unwanted insects. They guarantee comfort at home even with an opened window and the light on.

The easy way of fixing a mosquito net is by using swivel brackets without compromising window frame structure. A mosquito net mounted in the window increases its functionality and effectively protects the room from insects.

Weatherproof materials guarantee durability for years to come. The use of mosquito nets does not limit visibility.

Mosquito frames can be made in any colour from the RAL palette.

## SWISSPACER

### WARM EDGE SPACE BAR

Additional benefits include the SWISSPACER warm edge spacer bar which seals the edges of glazing units for perfect thermal insulation. The high functionality of „warm frames” for the construction of glazing units is due to the fact that they allow to raise the window temperature from the side of the room at the point of contact of the frame and the pane. As a result, there is a significant reduction in condensation in this area.

# GLASS

## PATTERNS

Decorative glass is both decorative and functional. It is the perfect solution for natural interior while maintaining the privacy of your room. Decorative glass is ideally suited for use in office walls, as balustrade elements and even in glass doors

## AIRING

Energy-saving airing without drafts

parallel positioning  
system on 6 mm

During ventilation, the window meets the requirements of ENV 1627-1630 Class Rc2, the same as for closed window shutters.

# WINDOW

## FITTINGS

Window fittings are one of the most important elements of windows. They determine which features will a window will have. Depending on the function of the room where the window is installed, various types of fittings can be used to provide increased burglary protection, costaving ventilation, for example, a child lock.

# ENTRANCE DOORS

COMPOSITE DOORS

The VIKKING brand is synonymous with customised windows and doors. In times of a global trend towards product unification and standardisation, we are one of the few companies that offer products tailored to customers needs.

Composite doors, unlike traditional metal or aluminium doors are made only of materials which protect against the loss of valuable energy.
